

Installation Instructions for Aquadecor Magnetic Rocks:

1. Unpacking:

- Carefully unpack the Aquadecor Magnetic Rocks from the packaging.

2. Cleaning:

- Wash the rocks thoroughly with hot water to remove any dust or debris.

3. Installation with Magnets:

- If the product comes with magnets, install it in a full tank.
- Place the magnetic rocks at the desired locations within the aquarium.
- Ensure the magnets are properly aligned to provide secure attachment.
- If installing in an empty tank, use clips to temporarily secure the rocks until the tank is filled with water.

4.

5. Installation with Suction Cups:

- If the product comes with vacuum suction cups, it can be installed in an empty tank.
- Position the rocks as desired and attach them using the suction cups.
- Optionally, use clips to provide additional support until the tank is filled with water.

6. Securing in Empty Tank:

- If installing in an empty tank, regardless of magnets or suction cups, consider using clips to temporarily secure the rocks until the tank is filled with water.

7. Fill the Tank:

- Once the rocks are in place, gradually fill the tank with water.
- Check the alignment and stability of the rocks as the water level rises.

8. Final Adjustments:

- Make any necessary adjustments to the placement of the rocks as the tank fills.
- Ensure that the rocks are securely in place without any risk of displacement.
